Computer Science student at Binus University with a 3.94 GPA expected to graduate in April 2027. Passionate about System Architecture, Distributed Systems, Object-Oriented Design, and Data Structures. My projects span microservice, SOA full-stack development, CLI Internal Apps, migration tools. I thrive in environments that encourage continuous learning, technical challenges, and collaborative problem solving.

EXPERIENCE

Software Engineer

Jakarta, 02/2026 – Present

SSG 4 Binus Maya Team – IT Division Bina Nusantara

- Designed, developed and maintained over 30 backend services consisting of REST API, Event- and message-based services, Scheduler, Pub/Sub in EDA architecture to ensure scalability, modularity and maintaining clean separation of concerns.
- Monitored system performance and logs, troubleshooting issues, resolving scaling problems, and addressing service failures.
- Implemented Redis Redlock architecture to resolve racing conditions across several Concurrent running APIs ensuring data consistency during distributed operations.
- Investigated duplicate and lost event issues caused by Azure Event Hub checkpointing and Azure Functions partition rebalancing, identifying root causes and proposing architectural improvements.
- Refactored team's internal event processing architecture to eliminate duplicate data and improve delivery reliability.

Application Architect - Internships

Jakarta, 02/2025 – 02/2026

Tech R&D – Apps Team – IT Division Bina Nusantara

- Enhanced over 40 internal NuGet codebase to .NET 8 to enhance performance on new bulky operations and caching feature.
- Built internal CLI generators that reduced boilerplate creation time for .NET services and standardized project structure across engineering teams.
- Migrated Kafka services to a self-hosted Kubernetes env using Strimzi.io Kafka operator ensuring seamless integration simplifying deployment and improving operational flexibility.
- Refactored over 15 internal Kafka subscribers by separating consumer commit logic from message handlers, improving maintainability and failure recovery.

Software Engineer

Remote, 01/2025 – 03/2025

Nextsoft – PT. Paramdaksa Teknologi Nusantara

- Refactored over 50 legacy JSP-based applications over 100,000+ lines of code by following service-oriented-architecture.
- Analysed and mitigated XSS vulnerabilities by input validation and implemented internal secure coding standards.
- Translated old jQuery-based code to CSS3 and VanillaJS thus reducing dependency overhead and improving maintainability.
- Refactored coupled monolithic JavaScript, CSS, and JSP into service-oriented-architecture improving targeted scalability.

PROJECTS

Internal Kafka Migration Tools | IT Division Bina Nusantara | 2025

- Developed an internal migration pipeline to migrate Kafka cluster from Zookeeper to KRaft.
- Removed scalability bottlenecks and simplified cluster management process reducing migration time by 30–40%, depending on the cluster size.

Besprechung | Personal Project | Ongoing

- Developing an open-source video conferencing platform using Go, WebRTC, gRPC, and distributed service architecture.
- Implementing various native Go concurrency patterns to provide efficient, non-blocking multitasking.

EDUCATION

Bina Nusantara University

09/2023 – 04/2027 (Expected)

Computer Science – Bachelor of Science, Jakarta – **Current GPA: 3.94**

- 2025 School of Computer Science Dean's List Award out of 6000+ Students.

ACHIEVEMENTS

Technoscape Hackathon 7.0 – 1st Place – National Level

- Led a team to develop AI-powered customer support chatbot to assist in generating optimal responses, sentiment analysis and translation through intelligent suggestion.

ICPC Regional Asia Jakarta 2025 – 23rd – National / Regional Level

- Placed at 23rd in Indonesia National Contest (INC) advancing to the ICPC Asia Jakarta Regional Contest 2025.

SKILLS

Languages & Libraries: Go, C#, C++, JavaScript, Java, React, HTML, CSS, JavaScript, Flutter.

Backend: .NET, Spring Boot, Node.js, gRPC, GraphQL, REST APIs, Microservices, Service-Oriented-Architecture

Messaging & Distributed Systems: Apache Kafka, Azure Event Hub, Event Grid, RabbitMQ

Cloud & Infrastructure: Azure Functions, AKS, Docker, Kubernetes, EC2, S3, Jenkins, SonarQube.

Databases: PostgreSQL, MySQL, Redis, CosmosDB
