SUMMARY

I'm a dedicated Computer Science student at Binus University with a 3.94 GPA, excelling in System Architecture Design, OOP, Code Reengineering, and Algorithm & Data Structures. My projects span full-stack development (MERN, PERN), Go, Java, C++ CLI Apps, .NET and strong implementation of DevOps cycle and Cloud Computing practices using Azure, AWS specially in Event Drive Architecture. I enjoy building secure, maintainable software and thrive in collaborative environments where I can keep learning, challenged and actively contributing to real-world problems.

EXPERIENCE

Full Stack Programmer – Full Time

02/2026 – Present

SSG 4 Binus Maya Team – IT Division Bina Nusantara, Jakarta

- Designed, developed and maintained 600+ backend services consisting of API, Event/Message Based service, Scheduler, Subscriber and Producers following EDA architecture to ensure scalability, modularity and clean separation of concerns.
- Assisted in setting up CI/CD pipelines for automated build, test, and deployment workflows across containerized environments.
- Participated in code reviews and architectural discussions to improve system maintainability and engineering standards.
- Monitored system performance and logs, troubleshooting deployment issues, scaling problems, and service failures in cluster environments.
- Debugging racing conditions bug on several Concurrent running APIs using red-locking architecture ensuring data atomicity.
- Debugging duplication and lost data problems due to EVH auto checkpointing and Azure Function rebalancing. Solved by creating custom Azure Event Grid push logic and disabling auto checkpoint.

Associate Software Engineer - Internships

02/2025 – 02/2026

Tech R&D – Apps Team – IT Division Bina Nusantara, Jakarta

- Upgraded codebase from .NET 6 to .NET 8, focusing on performance, compatibility, and maintainability mostly on bulky operations and caching reduced API latency and enhanced maintainability.
- Actively engaged in team communication, ensuring alignment across development, QA, and DevOps.
- Developed standardized .NET 6/8 Documentation & templates, Scheduler modules, and Kafka Publisher/Subscriber patterns for internal Backend Code Generator.
- Designed and implemented a Pub/Sub (Event-Driven Architecture) system for internal APIs using Apache Kafka, enabling real-time data streaming and decoupling service communication improving scalability.
- Implemented Circuit Breaker on Kafka and Redis Cluster Services using Polly ensuring resilience.
- Successfully assisted in migrating Kafka services from on-premises to a self-hosted Kubernetes environment using Strimzi kafka operator, ensuring seamless integration and scalability.
- Refactored Internal Kafka Subscriber to implement robust and to separate concern consumer commit from Handler.

Contract Freelance Refactor

01/2025 – 02/2025

Nextsoft – PT. Paramdaksa Teknologi Nusantara, Jakarta – Remote

- Refactored legacy JSP-based applications to improve security, structure, and maintainability
- Mitigated XSS vulnerabilities by sanitizing inputs, escaping outputs, and enforcing secure coding standards reducing security risks.
- Replaced old jQuery-based UI code with modern CSS and vanilla JavaScript, reducing dependency overhead and improving performance.
- Separated JavaScript, CSS, and JSP concerns to follow best practices in front-end architecture. Ensured compliance with Content Security Policy (CSP) and modern web security guidelines.

BNCC Activist & FAVE Talent pool Backend Dev Mentor

Bina Nusantara Computer Club, Jakarta – Remote

03/2024 – 04/2025

- Participated in Technoscape BNCC, contributed to the publication efforts for Hackathon 8.0 as part of Technoscape, the largest Binus University Computer Science event that includes the TechnoSummit and Hackathon.
- Play a key part at Software Solution Team that brought largest revenue amount of 70+ million Rupiah in FAVE Software House history.
- Appointed as Mentor to teach Backend Development to teach, guide, and QC Pull Request for every project that goes in or out the repository. Focused on Teaching basic REST and GraphQL API and Node.Js Framework.

EDUCATION

Bina Nusantara University

09/2023 – 03/2027 (Expected)

Computer Science, Software Engineering Stream – Bachelor of Science, Jakarta

- Current **GPA : 3.94**
- Completed coursework with a focus on Algorithm Design and Analysis, Object-Oriented Programming, OS, and Data Structures, Framework Layer Architecture consistently excelling in these areas.
- Appointed as Mentor by SASC (Student Advisory and Support Center) Binus University to teach underperformed student. Successfully teaches 11+ student improving GPA averages.

ACHIEVEMENTS

1st Place – TechnoScape Hackathon 7.0 – National Level

Lead Team to develop AI-powered customer support chatbot that assist service agents by:

- Generating optimal responses using intelligent suggestion algorithm.
- Performing sentiment analysis to gauge customer emotions and prioritize issues.
- Automatically translating messages into the desired language for seamless multilingual support.
- The solution streamlined customer service workflows and demonstrated practical use of AI/NLP in real-time communication tools.

ICPC Regional Asia Jakarta 2025 – 23rd – National / Regional Level

Participated in Competitive Programming Contest

- Successfully placed at 23rd in INC (Indonesia National Contest) thus advancing to ICPC Regional Asia Jakarta 2025
- Implemented various advanced algorithm especially Segment Tree and Dijkstra.
- Coordinated a team consisting of 3 students.

SKILLS

Technical Skills

- **Languages & Frameworks:** C/C++, C#, .NET, Laravel, JS, React.js, Node.js, Spring Boot, Flutter, JSP, Go, Python
- **Backend Development Stack:** MongoDB, PostgreSQL, Cosmos DB, Kafka, RabbitMQ, Redis.
- **API Stack :** REST API, gRPC, GraphQL.
- **DevOps:** Azure DevOps, SonarQube, CI/CD Pipeline Management, Automated Code Analysis/Testing (CodeQL), Kubernetes, Docker, Jenkins.
- **Cloud Computing:** AWS S3, EC2 Instance, Vercel, Firebase, Supabase, Azure EKS, Azure Function, Event Grid, Event Hub, Azure Service Bus.
- **Version Controll:** Git.
- **Machine Learning:** Convolutional Neural Networks (CNNs), Natural Language Processing (NLP), Random Forest.

Soft Skills

- **Time Management:** Ability to prioritize tasks and meet deadlines while maintaining code quality.
- **Team Collaboration:** Strong communication skills, working effectively with developers, QA, and stakeholders.
- **Mentorship & Teaching:** Experience in guiding students, including those with learning disabilities.
- **Problem Solving:** Creative and analytical approach to debugging, refactoring, and improving codebases.
